Improving outcomes

## Annual Health Checks

People with Severe Mental Illness (SMI) or Learning Difficulty (LD) are at greater risk of poor physical health but regularly miss annual health checks.

Clinical teams struggle to meet national targets of 75% of people with an SMI or LD receiving a physical annual health check.

A digital solution that allows Annual Health Checks to be completed in a patient's own home or at other community health settings such as day centres.

# Annual Health Checks

The Five Year Forward View and NHS Long Term Plan commits to improving access to Annual Physical Health Checks (AHC). Always up for a challenge, Health Call Annual Health Check has been designed to encourage increased uptake by making it easier for clinical teams to provide ACH's in a variety of settings where the patient feels most comfortable, minimising any potential distress to those who do not wish to attend a clinical setting.

Health Call Annual Health Check is simple to use and we provide you with a comprehensive SMI

Health kit which includes devices that enable you to conduct clinically approved POC testing and observations plus a 4G enabled tablet to record results.

Guided by a series of prompts, results are inputted into a safe and secure portal and received directly into the GP's patients electronic record (EPR).

## Joined up care and communication

- Community Health Care Professionals can identify health conditions such as heart disease and diabetes and notify the GP practice in real time, so the patient can be treated before further deterioration
- The ability to identify conditions earlier in the community will reduce the likelihood of unnecessary hospital admissions

## Technology you can trust

- Results are integrated directly into the EPR - so no need for extra admin tasks and duplication of work
- MHRA approved devices
- We integrate easily with leading GP and hospital systems, meaning potentially lifesaving patient data can be accessed quickly by authorised professionals
- You don't have to be a 'techy' to use our simple solution
- Our technology has been used by over one million patients

## A better experience for all

- Patients with SMI or LD can receive checks in a familiar setting to minimise distress
- We have designed a better way to connect primary and secondary care teams
- Kits are easy to transport and portable point of care testing devices
- Engages vulnerable patient groups
- Rapid point of care result provides opportunities for lifestyle advice at POC
- Reduction in administration burden as reduced need for follow up appointments

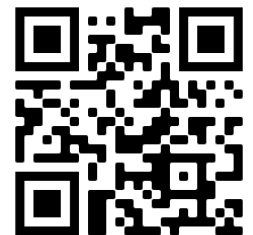

Take a peek inside the bag

- 4G Tablet (optional Mobile Device Management)
- Health Call Professional App installed
- Mobile Device Management installed
- Point of Care Device for rapid HbA1c and Lipid result
- Class III Scales
- BP machine
- A low weight Kit bag to ensure safe and secure transport
