

ANNUAL PHYSICAL HEALTH CHECKS

HEALTH CALL

INNOVATE • DIGITISE • TRANSFORM

Make APHC accessible for everyone, with the tools to perform high quality health checks from the patients home

Achieve national targets

Increase uptake of APHC

Increase accessibility

Make it easier for hard-to-reach groups to access APHC

Support early intervention

Get improved outcomes for people with SMI or LD

ANNUAL PHYSICAL HEALTH CHECK

Help clinical teams reach their targets and increase uptake of health checks by improving accessibility. Our portable kits enable clinicians to conduct health checks in patients' homes or community health settings.

THE CHALLENGE

The Five Year Forward View and NHS Long Term Plan commits to improving access to Annual Physical Health Checks (APHC). People with Severe Mental Illness (SMI) or Learning Difficulty (LD) are at greater risk of poor physical health but regularly miss annual health checks.

Cardiovascular disease clinical teams struggle to meet national targets of 75% of people with an SMI or LD receiving a physical annual health check. People with SMI have a life expectancy 15- 20 years less the average person.

THE SOLUTION

This simple solution removes any barriers patients might be facing to attend their health check appointment, like travel arrangements, mobility, and health issues etc.

Health care professional can perform point of care checks using the Bradford screening tool, with results SNOMED coded straight into their EPR. Community Health Care Professionals can identify health conditions such as heart disease and diabetes and notify the GP practice in real time, so the patient can be treated before further deterioration.

BENEFITS

- ✔ Removes barriers to increase engagement
- ✔ Improve patient experience
- ✔ Increases productivity for clinical teams
- ✔ Promotes early intervention
- ✔ Improve health inequalities for people with SMI and learning disability
- ✔ Improve accessibility
- ✔ Saves clinical time i.e travel to return samples
- ✔ Increased flexibility for teams to conduct checks
- ✔ Supports early intervention to reduce future hospital admissions

FEATURES

- Results are SNOMED coded into GP's Electronic Patient Record (EPR)
- Health checks performed using the Bradford Screening tool
- Lightweight portable kits
- Clinicians will be guided through a series of prompts on the app
- Point of care device for HbA1c, lipids
- Class III scales for weight, BMI
- MHRA approved devices
- Integrate easily with leading GP and hospital systems
- Potentially lifesaving patient data can be accessed quickly by authorised professionals

HEALTH CALL

INNOVATE • DIGITISE • TRANSFORM

Used by 1.5 million patients
Clinician led technology
Proudly in 73 NHS Organisations

Our specialist team can work with organisations to adapt the solution to individual needs and integrate it into your service and electronic records. We can also provide full training to staff and end users to ensure it is integrated seamlessly into your organisation and used at its full potential.
